Digital literacy Report

CSE0001: Digital literacy

Submitted by:

Name: Rishabh Raj

Registration Number: 25BAI10261

Branch: B.Tech CSE AI and ML

Course Code: CSE0001 - Digital Literacy

Role: Student Digital Ambassador

Date of submission: 31 march, 2026

Institution: VIT bhopal

Introduction

Project Context: As a newly selected Student Digital Ambassador, my role is to guide my peers in navigating the digital world safely and responsibly.

Project Objectives: This report documents the creation of my foundational Digital Literacy Portfolio . It encompasses five core modules: creating visual awareness materials, setting up professional digital profiles, utilizing academic collaboration tools, applying email etiquette, and researching cybercrime prevention . All project deliverables have been organized within a centralized GitHub repository .

Task 1: Digital Literacy Infographic

Tools & Content: I utilized Canva to design a one-page visual resource . The infographic defines what digital literacy is, highlights essential digital tools for students, and outlines foundational safe internet practices .

Reflection: The primary challenge during this task was condensing complex information into a clean, visually appealing format without overcrowding the layout. I learned that in digital communication, establishing a clear visual hierarchy is just as important as the information being presented.

Task 2: Student Digital Portfolio

Platforms Established: I established professional profiles on GitHub, LinkedIn, and Kaggle .

Purpose & Future Plans

- **GitHub:** Serves as my primary code repository and features a profile README outlining my academic goals . Over the next four years, I will use it to archive coursework and personal projects.
- **LinkedIn**: Acts as my digital resume. I have updated my education section and will use the platform to connect with industry professionals and peers .
- **Kaggle:** Highly relevant to my CSE AI and ML branch, this platform will allow me to access datasets and participate in machine learning competitions to build practical skills.

Task 3: Coding & Collaboration Platforms

Part A - Coding Practice I engaged with Hackerearth to familiarize myself with coding practice platforms. I successfully completed the beginner-level 'Solve Me First' Python challenge.

Part B - Google Workspace Collaboration I built a 5-question 'Digital Literacy Awareness Quiz' using Google Forms to test peers on basic online safety concepts. The form includes both multiple-choice and short-answer questions.

Reflection: Hackerearth will be instrumental in strengthening my foundational programming skills for lab assessments. Google Workspace tools like Forms and Sheets will streamline data collection and team coordination for future academic group projects.

Task 4: Professional Email & Etiquette Guide

Part A - Professional Emails I drafted two professional emails: one to a professor requesting an assignment deadline extension, and another to a coordinator expressing interest in a summer internship. Both drafts feature a clear subject line, a professional greeting, a well-structured body, and a proper sign-off.

Part B - Social Media Checklist To promote responsible online behaviour, I created a checklist outlining 5 Do's and 5 Don'ts for social media use as a college student.

Communication Scenario & Learnings: Poor digital etiquette can have real-world consequences. For example, I researched a scenario where a student lost a valuable internship opportunity because their inquiry email lacked a subject line and used text-message abbreviations. This reinforces that standard email etiquette is non-negotiable for establishing professional credibility.

Task 5: Cybercrime Awareness

Part A - Case Study My case study focused on UPI and Online Payment Fraud. I detailed how the crime typically happens step-by-step, who is targeted, and the financial consequences.

Part B - Prevention Checklist I created a 'Stay Safe Online' checklist featuring 8 specific, actionable prevention tips for college students. This includes specific advice for financial and UPI safety, as well as the reporting channels for the National Cyber Crime Portal and Helpline 1930.

Reflection: I was surprised by how heavily cybercriminals rely on psychological manipulation, like creating a false sense of urgency, rather than complex hacking. As a result, I will implement a strict "pause and verify" rule and will no longer interact with unexpected payment requests without verifying the sender's identity.

Conclusion

Completing this Digital Literacy Project has transformed my understanding of responsible digital citizenship. Moving from a passive internet user to an active creator of digital assets—whether by building a GitHub repository, practicing secure communication, or analyzing

online threats—has equipped me with a practical, professional foundation that will support my entire B.Tech journey.
